## Bibliography

This book is a little like the preview of coming attractions at the movies; it's meant to whet your appetite in several directions, without giving you the complete story about anything. To find out more, you'll have to consult more specialized books on each topic.

There are a lot of books on computer programming and computer science, and whichever I chose to list here would be out of date by the time you read this. Instead of trying to give current references in every area, in this edition I'm listing only the few most important and timeless books, plus an indication of the sources I used for each chapter.

Computer science is a fast-changing field; if you want to know what the current hot issues are, you have to read the journals. The way to start is to join the Association for Computing Machinery, 1515 Broadway New York, NY 10036. If you are a full-time student you are eligible for a special rate for dues, which as I write this is \$25 per year. (But you should write for a membership application with the current rates.) The Association publishes about 20 monthly or quarterly periodicals, plus the newsletters of about 40 Special Interest Groups in particular fields.

---

## Read These!

If you read no other books about computer science, you must read these two. One is an introductory text for college computer science students; the other is intended for a nonspecialist audience.

Abelson, Harold, and Gerald Jay Sussman with Julie Sussman, *Structure and Interpretation of Computer Programs*, MIT Press, Second Edition, 1996.

The introductory computer science text at MIT, this book uses Lisp as the vehicle for an intense study of everything from data structures to machine architecture. Although it's not a book about artificial intelligence as such, this is the definitive presentation of the artificial intelligence view of what computer science in general is about, and the best computer science book ever written.

Hofstadter, Douglas R., *Gödel, Escher, Bach: an Eternal Golden Braid*, Basic Books, 1979.

This book won the Pulitzer Prize for its success in explaining to readers who aren't computer scientists some of the deepest ideas of computer science, and it makes a strong case for the view that those ideas also have a lot to teach us about human intelligence.

---

## Chapter 1: Automata Theory

The reference I used in thinking about this chapter was

Minsky, Marvin, *Computation: Finite and Infinite Machines*, Prentice-Hall, 1967.

Part of the interest of this particular text is that its author is a leading figure in artificial intelligence research, and so the question of whether the insights of automata theory apply also to human intelligence is always visible as a motivating force in the presentation of the theory. Minsky's bibliography will refer you to the original papers by Turing, Kleene, Church, and so on as well as some left-field references to biological information processing from people like Lettvin and McCulloch.

---

## Chapter 2: Discrete Mathematics

This chapter touches on several topics. An overall introduction for computer scientists is

Liu, Chung Laung, *Elements of Discrete Mathematics*, McGraw-Hill, Second Edition, 1985.

This book requires no advanced mathematical background, but it does require that the reader feel comfortable with mathematical notation and the notion of formal proof. The topics include both purely mathematical ones, like set theory, combinatorics, and modern algebra, and related computer science ones like computability, formal languages, automata theory, analysis of algorithms, and recursion. This list is not unlike the one in the book you're reading now, and in fact Professor Liu expresses a goal similar to mine: to show computer science undergraduates the relevance of mathematics to their work. The difference is that I use actual programs to illustrate the ideas whenever possible, whereas this is a "straight" math book. (Of course another difference is that he treats all these topics in much more depth. But don't be scared away; he starts simply.)

On the topic of mathematical logic, there is a range of books that vary in accessibility. Among the most pleasant are

Smullyan, Raymond, *What Is the Name of This Book?* Prentice-Hall, 1978

Ø, *The Lady or the Tiger?* Knopf, 1982

Ø, *5000 B.C. and Other Philosophical Fantasies* St. Martin's, 1984

Ø, *Alice in Puzzle-Land* Penguin, 1984.

These are books of puzzles based on logic, but they go beyond the simple propositional inference puzzles like the one in the text. Smullyan starts with some of the classic puzzle categories, like the Liars and Truth-Tellers puzzle, and builds up to an exposition in puzzle form of topics like self-reference, modal logic, and Gödel's Theorem.

<sup>a</sup>Logic programming<sup>o</sup> is the use of mathematical logic formalisms as a programming language. It is also called <sup>a</sup>declarative programming<sup>o</sup> because instead of issuing commands to the computer, the programmer makes statements about things known to be true. The algorithm by which the programming system makes inferences from these statements is not explicitly provided by the programmer, but is built into the language.

The most widely known logic programming language, although not the only one, is Prolog. An accessible introductory text is

Ennals, Richard, *Beginning Micro-Prolog*, Harper & Row, Second Edition, 1984.

I list this book here because it's a Prolog text and therefore relevant to mathematical logic, but for me the main interest of the book is that it argues for the use of Prolog in teaching kids, as an alternative to Logo. The book gives examples of logic programming at work in various curriculum areas.

---

### **Chapter 3: Algorithms and Data Structures**

To a software engineer, the issues in this chapter are among the central ones in computer science. That's not my own way of thinking, so it's possible that my presentation doesn't give the field all the pizzazz that an enthusiast would manage. To compensate for that, you should read

Bentley, Jon, *Programming Pearls*, Addison-Wesley 1986.

This is a collection of monthly articles written by Bentley for the Communications of the Association for Computing Machinery. It requires virtually no formal mathematics and is extremely readable. If the book has a moral, it's <sup>a</sup>Think first, program later.<sup>o</sup> It makes its case with a number of true-to-life examples of projects in which orders of magnitude were saved in the execution time of a program by rethinking its fundamental structure.

---

## Chapter 4: Programming Language Design

There are textbooks in "comparative programming languages", but I'm going to stick to the strategy of the chapter by using Pascal as the example. Structure and Interpretation of Computer Programs, one of my must-reads, will be useful as a contrast here, giving the Lisp point of view.

Jensen, Kathleen, and Niklaus Wirth, Pascal User Manual and Report, Springer-Verlag, Third Edition, 1985.

This is the official report of the international committee responsible for the design of the language. The book has two parts, a reference manual and the committee report itself. The latter includes some explicit discussion of the design decisions in the language.

---

## Chapter 5: Programming Language Implementation

I really didn't have a reference for this chapter; I just sort of forged ahead on my own! But here's the book I should have read first:

Friedman, Daniel P., Mitchell Wand, and Christopher T. Haynes, Essentials of Programming Languages, MIT Press, 1992.

This book uses the Scheme dialect of Lisp as the basis for a study of programming language interpreters. It's harder reading than most of the books in this bibliography, but it encourages the reader to think very deeply about how programming languages work.

---

## Chapter 6: Artificial Intelligence

I'll list two references here; one on language understanding in general and one that contains a paper about the Student program specifically.

Winograd, Terry, Language as a Cognitive Process, Volume 1: Syntax, Addison-Wesley, 1983.

A planned second volume on semantics was not published. This is a technically meaty book, but considering its depth it is quite readable.

The book strikes a good balance among technical programming issues, psychological issues, and the ideas of mainstream linguistics. It includes an extensive bibliography. When I attended Terry's course at Stanford in which he first presented the material that became this book, it was the first time I experienced a course that ended with a standing ovation for the instructor. The book shows the same clarity of explanation and the same enthusiasm.

Minsky, Marvin L., *Semantic Information Processing*, MIT Press, 1969.

This is a collection of early research reports. I include it here because one of its chapters is a paper by Bobrow on STUDENT, and you won't be able to find the more complete description in Bobrow's unpublished thesis. Other chapters describe similar microworld-strategy projects of the same vintage.

---

## Computers and People

Last but far from least, some of the most fascinating reading connected with computer science is found outside of the technical literature, in the reactions of psychologists, philosophers, and sociologists to the computer as a social force. You owe it to yourself to understand the human context of your work; you owe it to everyone else to be strongly aware of the social implications of what you do.

Turkle, Sherry, *The Second Self: Computer and the Human Spirit*, Simon and Schuster, 1984.

A sociologist's view of the computer culture, this book explores both the psychology of computer experts and the ways in which a computer-rich environment has changed the thinking of non-experts not only about technology but about what it means to be human.

Weizenbaum, Joseph, *Computer Power and Human Reason: From Judgment to Calculation*, W. H. Freeman, 1976.

Weizenbaum is a computer scientist, and this book is in part a technical argument about the limitations of what computers can do. But it is more importantly a call to computer scientists to take responsibility for the uses to which their inventions are put. Weizenbaum argues that there

are things we shouldn't do with computers, even if we can learn how to overcome the technical obstacles. Computer-based weapons of war are an obvious example, but Weizenbaum is also worried about things like automated psychotherapy which was just a daydream when the book appeared but has since become a reality to a limited extent. Many computer scientists find this book offensive, and it is certainly possible to find flaws in the details. But the critics rarely present an alternative with an equally strong social conscience.

Dreyfus, Hubert L., *What Computers Still Can't Do: A Critique of Artificial Reason*, MIT Press, 1992.

Dreyfus is a philosopher who uses the phenomenological ideas of Heidegger and others to suggest a fundamental flaw in the assumptions AI researchers make about human intelligence. To try to sum it up in one sentence, the sort of thinking that people do in solving a puzzle is very different from the much more profound intelligence we use in carrying out our more customary activities. AI programs mimic the former but not the latter. This is a revision of an earlier book, taking into account more recent developments in AI research.

Weinberg, Gerald M., *The Psychology of Computer Programming*, Van Nostrand Reinhold, 1971.

This book studies programming as a social activity, programming as an individual activity, and the programming environment. In my opinion, its main contribution is the idea of "egoless programming," which means more or less that when your friend finds that impossible bug in your program for you, you should feel happy rather than threatened. Weinberg offers several good ideas for how to act as part of a programming community. On the other hand, I'm less enthusiastic about his manager's-eye view of the programmer as a cog in the machine, rather than as a creative artist. But overall I think this book is well worth reading; it's also entertainingly written.

# General Index

This index lists technical terms and primitive procedures. There is also an index of defined procedures, which lists procedures whose definitions are in the text.

## A

Abelson, Harold ix, xvii, 342  
accepting state 4  
access random 148  
actual argument 176  
adder 71  
adder, finite-state 25  
address 147, 231  
age problem 281, 290  
aggregate type 187  
algebra word problems 278  
algorithm 15, 107, 294  
algorithm, two-stack 225  
algorithms, analysis of 107  
allocation, dynamic 148  
alphabet rule 11, 16  
alternatives rule 11, 19  
ambiguous 217

analysis of algorithms 107  
analysis, lexical 215  
Anderson, Chris xvii  
APL 224  
apprenticeship xi  
argument, actual 176  
array 181, 187, 199  
array, packed 188, 189  
artificial intelligence 277  
assembly language 231  
assignment statement 178, 180, 195  
Association for Computing Machinery 341  
association list 287  
ATN 312  
augmented transition network 312  
automata theory 1, 309

---

## B

background 300  
backtracking 65  
balanced tree 146  
balancing parentheses 13, 28  
Baldwin, Diane C. 53  
BASIC 196  
Beatles 46  
begin (Pascal) 175

Bentley, Jon 344  
 bibliography 341  
 binary computer 69  
 binary number 25, 88  
 binary operator 223  
 binary search algorithm 143  
 binary tree 132, 144  
 binding, call by 199  
 binomial coefficient 82  
 bit 26, 28, 71  
 block structure 166, 177  
 Bobrow, Daniel G. xvii, 278  
 Boolean (Pascal) 187  
 bottom-up 175  
 bound reference 184  
 branch node 132  
 byte 147, 188

---

## C

C 225  
 CAI, intelligent 294  
 call by binding 199  
 call by reference 197, 198  
 call by value 197, 198  
 call, procedure 178  
 category 49  
 char (Pascal) 187  
 checking, compile-time 223  
 Chinese food 46  
 circuit, integrated 230  
 Clancy, Michael xvii  
 closed form definition 80, 98  
 code generation 211, 245  
 coefficient, binomial 82  
 coefficient, multinomial 94  
 cognitive science 278  
 Colby, Kenneth 31  
 combination lock 74, 79  
 combination 74, 86  
 combinatorics 72  
 common subexpression elimination 109  
 community xv  
 compile-time checking 223  
 compiler 172

compiler 219, 224  
 compiler, incremental 174  
 compiler, optimizing 109  
 compiler, Pascal 209  
 complexity ix  
 composition of functions 162  
 compound proposition 46  
 compound statement 177  
 computer assisted instruction 294  
 computer center xv  
 computer hardware 69  
 computer logic 71  
 computer science ix  
 computer, binary 69  
 concatenation rule 11, 17  
 conditional statement 177  
 constant string 189  
 constructor 137  
 context, limited 278  
 context-free language 310  
 continuous function 45  
 contradiction, proof by 34  
 contrapositive rule 61  
 correctness 107  
 correspondence, one-to-one 89  
 counting problem 45

---

## D

data structure 107, 129  
 data type 187  
 Davis, Jim xvii  
 declaration part 176  
 declarative knowledge 16  
 declarative programming 168  
 declarative programming languages 16  
 declarative representation x  
 definition, closed form 80, 98  
 definition, formal 211  
 definition, inductive 80, 91, 94, 112  
 definition, recursive 12  
 descent, recursive 220  
 deterministic grammar 219  
 directed graph 22  
 discrete mathematics 45

Dreyfus, Hubert L. 347  
 dyadic 224  
 dynamic allocation 148  
 dynamic environment 184, 241  
 dynamic programming 115  
 dynamic scope 184, 185, 197, 198, 242

---

## E

economics xiv  
 editor, text 9, 169  
 education 294  
 effective procedure 31  
 efficiency 107  
 elementary function 80  
 elimination rule 50  
 embedding 310  
 end (Pascal) 175  
 engineering, knowledge 278  
 English 278  
 Ennals, Richard 344  
 enumerated type 191  
 environment, dynamic 184, 241  
 environment, lexical 184, 198, 241  
 equation 281, 285  
 equivalence relation 68  
 ethics xiv  
 exclusive or 68  
 expansion, multinomial 112  
 experimental method 83  
 expert system 278  
 exponential 129  
 expression 223  
 expression, regular 11, 15, 211  
 extensibility 181  
 external memory 30

---

## F

factorial 79  
 fence 205  
 Fermat, Pierre de 82  
 finite-state adder 25  
 finite-state machine 3, 15, 213, 309  
 first 110

food, Chinese 46  
 forest 133  
 formal definition 211  
 formal parameter 176  
 formal thinking ix  
 for (Pascal) 178, 181, 183  
 frame pointer 236  
 frame, stack 235  
 free reference 184, 185  
 Friedman, Daniel P. 345  
 function, continuous 45  
 function, elementary 80  
 function, generating 81, 98  
 function, predicate 67  
 function, sine 81  
 function, truth-valued 46, 67  
 functional programming 162  
 functions, composition of 162  
 function on (Pascal) 194

---

## G

gate 69  
 general knowledge 300  
 generated symbol 141, 239, 293, 304  
 generating function 81, 98  
 generation, code 211, 245  
 global optimization 111  
 global pointer 235  
 Goldenberg, Paul xvii  
 grammar, deterministic 219  
 grammar, predictive 219  
 graph 22  
 graph, directed 22  
 graphics xiii

---

## H

half-adder 70  
 halting state 31  
 halting theorem 32  
 Hanoi, Tower of 169  
 hardware, computer 69  
 Harnadek, Anita xvii, 48  
 hash table 130

Haynes, Christopher T. 345  
heap 131  
heapsort 131  
heuristic 294, 298  
hierarchy 131, 146  
hierarchy, syntactic 213  
Hiltinger, Paul xvii  
Hoare, C. A. R. 125  
Hofstadter, Douglas R. 342

---

## I

if (Pascal) 221  
immediate 232  
implication rule 60  
incremental compiler 174  
independent 72  
index register 235  
index variable 205  
individual 49  
induction, mathematical x  
inductive definition 80, 91, 94, 112  
inference system 47  
inference, rules of 47  
infinite loop 32  
infinite set 89  
insertion sort 119  
instruction, computer assisted 294  
integers, sum of the 119  
integer (Pascal) 187  
integrated circuit 230  
intellectual property xv  
intelligence, artificial 277  
intelligent CAI 294  
interactive language 169  
intermediate language 173  
internal state 30  
interpreter 172  
intractable 129  
inverter 69  
Iverson, Kenneth E. 224

---

## J

Jensen, Kathleen 345

joke 112

---

## K

keyword 219  
Kleene, Stephen C. 16  
knowledge engineering 278  
knowledge representation 309  
knowledge, declarative 16  
knowledge, general 300  
knowledge, procedural 16  
Knuth, Donald E. 129

---

## L

label 234  
language, context-free 310  
language, interactive 169  
language, intermediate 173  
language, machine 172, 209  
language, non-interactive 169  
last 110  
leaf node 132  
lexical analysis 215  
lexical environment 184, 198, 241  
lexical scope 183  
limited context 278  
linear 129, 286  
linear search algorithm 143  
Lisp 185, 196, 282  
list, association 287  
list, property 301  
list, sorted 130  
Liu, Chung Laung 343  
load 147  
local optimization 110  
local procedure 176  
lock, combination 74, 86  
lock, Simplex 85, 114  
logarithm 129  
logic problem 45, 48  
logic programming 168  
logic, computer 71  
logic, predicate 67  
logic, propositional 46

logic, ternary 73  
Logo 169, 294  
Logo pattern matcher 283  
Logo variable 199  
lookahead 215  
lookahead, one-character 216  
loop, in@nite 32

---

## M

machine language 172, 209  
machine, @nite-state 3, 15, 213, 309  
machine, nondeterministic 6, 22  
machine, theoretical 1  
mandatory substitution 280  
matching, pattern 282, 308  
mathematical induction x  
mathematical model 1  
mathematics, discrete 45  
memoization 112, 312  
memory 147, 230  
memory, computer 28  
memory, external 30  
mergesort 126  
Meteor 282  
microworld 278, 297  
Minsky, Marvin 342, 346  
model, mathematical 1  
modification, tree 139  
monadic 224  
multinomial coefficient 94  
multinomial expansion 112  
multiplication rule 72  
mutator 141

---

## N

nand 70  
network, augmented transition 312  
network, recursive transition 213  
Newell, Allen 277  
node, branch 132  
node, leaf 132  
node, root 132  
non-interactive language 169

nondeterministic machine 6, 22  
nor 70  
null pointer 148  
number, binary 25, 88  
number, random 83  
numerical analysis xiii  
numof 281, 286

---

## O

object-oriented programming 167  
offset 235  
one-character lookahead 216  
one-to-one correspondence 89  
operating systems xiii  
operator precedence 223  
operator, binary 223  
operator, relational 224  
operator, unary 223  
optimization, global 111  
optimization, local 110  
optimizing compiler 109  
optional substitution 304  
ordered subset 74  
ordering 146  
ordering relation 68  
ordinal type 188  
overflow signal 71

---

## P

P-code 173  
packed array 188, 189  
pair 147  
Papert, Seymour x, 295  
paradigm, programming 162  
parameter, formal 176  
parameter, value 197  
parameter, variable 197  
parentheses 227  
parentheses, balancing 13, 28  
Parry 31  
parser 211, 212, 217  
parser generator 217  
partition sort 120, 204

Pascal 161, 310, 345  
 Pascal compiler 209  
 Pascal program 172  
 Pascal variable 199  
 Pascal's Triangle 82, 94  
 Pascal, Blaise 82  
 pattern matcher, Logo 283  
 pattern matching 282, 308  
 periodic 81  
 Perlis, Alan J. xi  
 permutation 74, 79  
 philosophy xiv  
 Piaget, Jean x  
 piracy, software xv  
 pointer 147, 190  
 pointer, frame 236  
 pointer, global 235  
 pointer, null 148  
 pointer, stack 236  
 portable 173  
 precedence 225, 285  
 precedence, operator 223  
 predicate function 67  
 predicate logic 67  
 predictive grammar 219  
 probability 73  
 problem, logic 48  
 procedural knowledge 16  
 procedural representation x  
 procedure call 178  
 procedure, effective 31  
 procedure, local 176  
 procedure, recursive 75, 80  
 procedure (Pascal) 176, 194  
 process ix  
 processor 147, 230  
 production rule 13, 212, 310  
 program verification 107  
 program, Pascal 172  
 programming languages, declarative 16  
 programming paradigm 162  
 programming, declarative 168  
 programming, dynamic 115  
 programming, functional 162  
 programming, logic 168

programming, object-oriented 167  
 programming, sequential 162  
 program (Pascal) 171, 172  
 Prolog 16, 68, 344  
 proof by contradiction 34  
 property list 55, 301  
 property, intellectual xv  
 proposition, compound 46  
 proposition, simple 46  
 propositional logic 46  
 psychology xiv, 277

---

## Q

quadratic 129  
 quadratic formula 108  
 quantifier 283  
 quicksort 125

---

## R

random access 148  
 random number 83  
 range 188  
 real (Pascal) 187  
 record 190  
 recursive definition 12  
 recursive descent 220  
 recursive procedure 75, 80  
 recursive transition network 213  
 reference, bound 184  
 reference, call by 197, 198  
 reference, free 184, 185  
 Reggini, Horacio xvii  
 register 230  
 register, index 235  
 regular expression 11, 15, 211  
 reject state 4  
 relation 67  
 relation, equivalence 68  
 relation, ordering 68  
 relational operator 224  
 repeat (Pascal) 178  
 repetition rule 11, 21  
 reserved word 183

retrieval time 131  
robust 109, 146, 193  
root node 132  
round (Pascal) 190  
RTN 213, 310  
rule, production 13, 212  
rules of inference 47

---

## S

scalartype 187  
science, cognitive 278  
scope 239, 241  
scope, dynamic 184, 185, 197, 198, 242  
scope, lexical 183  
search algorithm, binary 143  
search algorithm, linear 143  
searching 142  
selection sort 117  
selector 136  
self-reference 32  
semantics 180  
sentence, simple 281  
sentinel 205  
sequential programming 162  
set theory 89  
set, infinite 89  
sharable 150  
sigma 91  
Simon, Herbert A. 277  
simple proposition 46  
simple sentence 281  
simple statement 177, 178  
Simplex lock 85, 114  
simulation 83  
sine function 81  
Smullyan, Raymond 343  
sociology xiv  
software engineering x, 174  
software piracy xv  
Somos, Michael xvii  
sort, insertion 119  
sort, partition 120, 204  
sort, selection 117  
sorted list 130

sorting 115  
source file 171  
space, time and 130  
Spock, Mr. 72  
spreadsheet 16  
stack frame 235  
stack pointer 236  
start state 5  
state 3  
state, accepting 4  
state, halting 31  
state, internal 30  
statement part 175  
statement, assignment 178, 180, 195  
statement, compound 177  
statement, conditional 177  
statement, simple 177, 178  
statement, structured 178  
storage time 130  
store 147  
string, constant 189  
structure, block 177  
structured statement 178  
Student 278  
subrange type 191  
subset, ordered 74  
substitution technique 285  
substitution, mandatory 280  
substitution, optional 304  
sum of several terms 91  
sum of the integers 119  
Sussman, Gerald Jayix, 342  
Sussman, Julie 342  
symbol, generated 141, 239, 293, 304  
symmetric 68  
syntactic hierarchy 213  
syntax 179  
system, expert 278  
system, inference 47

---

## T

table of values 81  
table, hash 130  
ternary logic 73

text editor 9, 169  
 theoretical machine 1  
 thinking, formal ix  
 time and space 130  
 time, retrieval 131  
 time, storage 130  
 timesharing systems xvi  
 token 214  
 tokenization 211, 214  
 top-down 174  
 Tower of Hanoi 169  
 tractable 129  
 tradeoff 130  
 transition network, augmented 312  
 transition network, recursive 213  
 transitive 68  
 transitive rules 51  
 tree 131  
 tree modification 139  
 tree, balanced 146  
 tree, binary 132, 144  
 trunc (Pascal) 190  
 truth-valued function 46, 67  
 Turing machine 30, 311  
 Turing machine, universal 33  
 Turing's thesis 31  
 Turing, Alan M. 30  
 Turtle, Sherry xiv, xvii, 346  
 two-stack algorithm 225  
 type, aggregate 187  
 type, data 187  
 type, enumerated 191  
 type, ordinal 188  
 type, scalar 187  
 type, subrange 191  
 type, user-defined 191  
 typed variable 187  
 type (Pascal) 191

---

## U

unambiguous 217  
 unary operator 223  
 uniqueness rule 50, 67  
 unit 286

universal Turing machine 33  
 Unix xiii, xvi, 9  
 user-defined type 191

---

## V

value parameter 197  
 value, call by 197, 198  
 variable parameter 197  
 variable, index 205  
 variable, Logo 199  
 variable, Pascal 199  
 variable, typed 187  
 var (Pascal) 176, 178, 197  
 verification, program 107

---

## W

Wand, Mitchell 345  
 Weinberg, Gerald M. 347  
 Weizenbaum, Joseph 346  
 while (Pascal) 178  
 White, Dick xvii  
 Winograd, Terry xvii, 312, 345  
 Wirth, Niklaus 345  
 word 147, 189  
 word problems, algebra 278  
 word, reserved 183  
 workspace 171  
 workstations xvi  
 writeln (Pascal) 178  
 write (Pascal) 178

---

## Y

YACC 219
